Carnivores*

Feed Them Nature's Way

Dealing With CRF

Any cat caregiver's worst nightmare is learning one day their beloved friend has a terminal disease. The initial reaction to the diagnosis may be a feeling of helplessness and despair. While feline chronic renal failure (CRF) is progressive and terminal, with an early diagnosis, a lot of love, patience, and dedication the condition may be managed effectively for some time. There is no cure for renal disease, but there is hope in stabilizing and maintaining a good quality of life for your cat. If you are reading this then you are searching for that hope. It is proven that a natural raw food diet can be very beneficial to cats with mild to moderate renal failure. *Feline Instincts® Kidney Diet* supplement provides the basis for such a diet. Our holistic veterinarians have this to say about our *Kidney Support Diet...*

Dr. Anna Maria Gardner on CRF

"A natural raw food diet can be very beneficial to cats with mild to moderate renal failure, who are under veterinarian care. Feline Instincts' Kidney Support diet is modified to contain lower protein and higher fat, with B- vitamins that are so essential in renal failure. The kidneys can manage the lower protein intake and yet still enjoy the benefits of a raw food diet which is so much healthier for their bodies. Your holistic veterinarian can also prescribe natural remedies to help support your cat's kidneys along with this diet."

Anna Maria Gardner DVM, M.A. M.B. Holistic Veterinarian www.petsynergy.com

Feline Renal Support supplements by Standard Process

Most Holistic veterinarians prescribe an additional supplement called "**Feline Renal Support**" by **Standard Process** to go along with our raw food diet. Our study showed that cat's creatine levels are decreased significantly on this additional supplement. Your holistic veterinarian may have other natural remedies that will work also so please ask them about **Standard Process** supplements because only a veterinarian can prescribe them.

Your holistic veterinarian can call **Standard Process** for information at: 800-848-5061 or check their web site at: www.standardprocess.com

Important Note: Always consult your veterinarian concerning a diet for your cat that has kidney problems. Only holistic veterinarians believe in raw diets.

Recipe

Ingredients

1. 1 cup of filtered or distilled water
2. 1/2 cup of *Feline Instincts® "Kidney Support Diet"* supplement powder.
3. 2 lbs. raw ground or chopped boneless skinless chicken or turkey dark meats. Stew meats if beef.
4. 1 cup of raw liver: Use chicken liver for chicken & turkey. Beef liver for beef and Lamb. For liver powders see liver label and double the amounts to use.
5. 1.5 LB canned or steamed peeled & pureed Pumpkin. See below
6. 4 Salmon Oil Capsules (4000 mg) or 2 strokes of the salmon oil pump.

Mixing

1. Add water and salmon oil to a bowl and stir.
2. Add pureed liver and chopped, ground or diced meat and stir gently.
3. Add the Kidney Support Diet powder and stir gently until mixed well.
4. Add any 25 oz can of pumpkin/squash, or any kind of fresh Squash. For fresh squash, peel, seed and chop squash of choice. Then steam or cook well in a vegetable steamer and puree thoroughly in a blender or food processor. Set aside to cool before adding to recipe.
5. Mix thoroughly and package portions immediately for freezing by dividing portions as single or double meals in small freezer/snack/ sandwich bags. I use pint size freezer bags. Store bags in a large freezer bag or Tupperware containers. Divide bags with paper towels to avoid ripping bags when taking them apart from another bag. Portions can be frozen in ice cube trays, and then packaged in freezer bags once frozen.
6. Thaw bags as needed in water. Warm in warm tap water before serving. Never microwave food.

7. Keep meals frozen for up to 6 months and keep thawed only 24 or 36 hours. Don't leave food out for feeding more than 1/2 hour, then put back in fridge.

Yields 18 x 100 gram (1/2 cup) portions. All ingredients of this recipe are essential. Replacing or omitting ingredients will interrupt the nutritional balance.

Serve 1/2 - 3/4 cup twice a day or as directed by your vet. Stools will be less often and firm. Urination will be more than usual.

Handling Your Stress

Having a cat with renal disease can be a very stressful time for you too. Your stress will naturally be felt by your cat and can create more anxiety for them. Bach Flower has two flower remedies to help you name Elm and Sweet Chestnut. They will help you to remain strong, loving and supportive for your friend. Normally these remedies can be found in good health stores. If you cannot find them in your area call or email and I will direct you to a place online where you can buy it.

Enticements

If you have a finicky cat on your hands, feed your kitty at least 8 hours after their last meal. Remember, unfamiliar foods don't smell the same as they have been eating. Take a small amount and put it in the kitty's mouth. This should help them accept the new food. Our liver powders are also very good for transitioning kitty to the new foods. Some cats will throw up beef meats.

If that fails, stir in a small amount of spring water tuna juice in their meal just to flavor it. If they eat the meal, then gradually reduce the tuna juice each day until you are serving the meals without tuna juice. I used this for King Ramses and Lady Natascha and they were eating the raw diet in five days without any enticements. Our chicken liver powder or Halo 100% chicken treats work well also.
